Why choose CCFI Token in 2023

CCFI DeFi token functionalities

DeFi with CCFI

Fees charged by banks and other financial institutions are eliminated by a DeFi protocol

CCFI holders put their digital assets into a DeFi smart contract to generate more CCFI

Sablier.Finance uses real-time smart contracts to stream token on dApp. Users transact on the blockchain instantly by vesting tokens and connecting their wallet. The protocol streams tokens to CCFI holders, providing sustainable and efficient financial services.

Your CCFI tokens are vested instantly into your Wallet to protect the project, prevent dumping or manipulatory actions and to protect all holders from loosing value.

Sablier is a token streaming protocol available on Ethereum, Optimism, Arbitrum, Polygon, Ronin, Avalanche, and BSC

STAKING

In staking your assets generate more tokens for a certain period of time in different DeFi setups. CCFI is generating rewards paid in CCFI token on the NULS.io blockchain by staking NULS coins having an 14% APY. Through this DeFi protocol a natural demand of CCFI token is created.

FARMING

Yield farming is a DeFi smart contract where the holders of digital assets can participate in a farming-pool together with other holders to earn DeFi rewards, by lending the pool your assets in the smart contract via NULS Coin.

RaidaPay dApp is coming 2023 and has farming features integrated protocols.

DAO

The biggest advantage of a DAO (Decentralized Autonomous Organization) is the transparency and collective, decentralized governance of an enterprise, and suitable for DeFi CCFIToken.com

How we generate natural demand and increase the value of our DeFi utility token

RaidaPay aims to increase the value of its utility token by acting as a bridge between decentralized systems and exchanges. By utilizing the advancements of Binance's technology for scalability and adaptability, RaidaPay aims to simplify transactions between centralized and decentralized finance blockchains for faster and more seamless transactions. A limited supply of tokens will circulate to facilitate this connection

2023

03-04

2**02**4

To maintain and grow the token's sustainability, RaidaPay plans to improve marketing, air drops and adoptions, secure partnerships, and take advantage of market opportunities.

2023

RaidaPay aims to control the sustainability of its DeFi
Utility Token's value through use cases such as staking,
mining, trading and more energy-efficient solutions. The
value of CCFI token will rise as more transactions are
conducted with partners, and the token is already listed on
18+ exchanges with more planned in the future. The token
is supplied by partners like Nuls. HECO, OKEx, and Nerve.

CCFI | Sablier App

Sablier App, the protocol for realtime finance. This allows CCFI payments to be vested over time using Sablier token streaming protocol.

Powered by Ethereum Smart Contracts.

Schedule;

10.001 50.000 50,001 100,000 100,001 1,000,000 As a web3 organization, this technology helps you get rid of the hassle of distributing crypto assets on a recurring basis. After a one-time deposit, the Sablier smart contracts will start "streaming" the tokens towards the recipient, without you lifting a finger again.

12 months vesting

12 months vesting

12 months vesting

Sablier offers a secure location for CCFI Token holders by safeguarding their assets. By connecting their Metamask wallet, holders can access the Sablier network and take advantage of the vesting schedules outlined. These schedules involve freezing a portion of the asset for a set period of time, preventing the risk of pump-and-dump. This approach supports the growth and expansion of CCFI's value and its use cases and ecosystems.

(1/12 a month -(1/12 a mont)

he tokens are vested every minute you can withdraw anytime) okens are vested every minute you can withdraw anytime) (1/12 a month ns are vested every minute you can withdraw anytime)
